

MyCareer Compass

Technical Product Handoff - Renewed Workflow Version

Build objective

Create a validated skill-growth platform for the BD/KAM ecosystem. The platform builds a 9-skill profile, creates a quarterly Learning Journey, and gives HR/Admin progression decision assistance without promising role movement to employees.

Item	Detail
Source workbook	MyCareer_Process Flow.xlsx - renewed version
Source sheets	Workflow, Competency, Career Paths
Primary users	Employee, Manager, HRBP/Admin
In-scope ecosystem	BDMs, KAMs, ZMs, Category, Lead Category Manager / BDFE
Critical rule	Employee-facing experience remains skill-first; admin-only views handle progression decisions.
Version date	09 Jul 2026

1. What Changed in the Renewed Workbook

- Workbook is now cleaner with three source sheets: Workflow, Competency and Career Paths.
- The competency framework is now the core role-skill source: 9 skills, split into 5 functional and 4 behavioral skills.
- Career Path matrix now defines allowed backend comparisons across BDM, KAM, ZM, Category Manager and BDFE/Supply Category.
- Level 3 has clearer platform outputs: course recommendation, gamification/leaderboard, manager dashboard, nudges, MyMentor and admin dashboard.
- Level 4 now includes recalibration inputs and a validation rule: competency should not auto-decrease without validation.
- Some workbook labels have typos; deliverables normalize them as Learning Journey, Assessment, Continuous Feedback, Admin Dashboard and Progression Decision Assistance.

Recommended interpretation of ?competency cannot decrease?

The system should not automatically reduce a skill score from one weak signal. A decrease should require manager validation, strong AI/evidence signal, or HR/Admin review. Otherwise, keep score stable and flag for review.

2. Product Scope

MyCareer Compass is a career-growth and internal talent intelligence platform for the BD/KAM ecosystem. It combines employee input, manager validation, AI assessment, HR context signals and quarterly recalibration.

2.1 Roles in scope

- BDM RL1-2
- BDM RL3-4
- KAM RL1-2
- KAM RL3-4
- ZM RL4-5 / RL5-6 alignment to be confirmed
- Category Manager RL3-4
- Supply Category / BDFE RL2-4
- Lead Category Manager appears in the workflow title and should be confirmed as current scope or future scope.

2.2 Competency framework from workbook

Skill	Type	BDM RL1-2	BDM RL3-4	KAM RL1-2	KAM RL3-4	ZM RL5-6	Category RL3-4	BDFE RL2-4
Communication	Behavioral	Intermediate	Proficient	Proficient	Advanced	Advanced	Proficient	Intermediate
Stakeholder Management	Behavioral	Intermediate	Proficient	Intermediate	Proficient	Advanced	Advanced	Proficient
Ownership & Accountability	Behavioral	Intermediate	Proficient	Proficient	Advanced	Advanced	Advanced	Proficient
Team Management	Behavioral	Beginner	Intermediate	Beginner	Intermediate	Proficient	Intermediate	Beginner
Consultative Selling	Functional	Intermediate	Proficient	Intermediate	Advanced	Advanced	Intermediate	Intermediate
Data Analytics	Functional	Intermediate	Proficient	Intermediate	Proficient	Advanced	Proficient	Advanced
Portfolio Growth	Functional	Intermediate	Proficient	Proficient	Advanced	Advanced	Proficient	Proficient
Price Parity Management	Functional	Intermediate	Proficient	Proficient	Advanced	Advanced	Intermediate	Intermediate
Business Acumen	Functional	Intermediate	Proficient	Intermediate	Proficient	Advanced	Advanced	Proficient

Implementation note: store this matrix as configurable master data. Do not hard-code the values in application logic.

3. End-to-End Workflow

3.1 Level 1: Validated BD Skill Profile

Level 1 creates the BD skill profile across 9 skills.

- Functional skills: employee self-rating contributes 20%; manager validation contributes 80%.
- If employee-manager gap is greater than 2 levels for a skill, reject employee score and use manager score.
- Behavioral skills are assessed through AI roleplays / AI assessment.
- Role Based Competency Framework is the source for expected skill levels.
- Learning TNA, annual/interview feedback, continuous feedback and Amber are used only if data is six months old or newer.
- Variable percentage and demographics are used as confidence/validation signals, not direct skill score inputs.

3.2 Level 2: Defining Learning Needs and Backend Path Fit

- Input is the validated BD Skill Profile and the Ideal Skills Profile across roles.
- First compare the BD profile with the ideal BD profile.
- Run gap analysis to identify learning needs based on skill deficit.
- If the ideal BD profile matches the BD profile, backend can compare profile with KAM, ZM, BDFE and Category roles using the Career Paths matrix.
- Employee-facing output remains Learning Journey and skill focus. Role readiness remains HR/Admin-only.
- Mentor is assigned if needed based on skill deficit, role context and availability.

3.3 Level 3: Learning Journey

Level 3 converts skill gaps into learning and action. It produces employee growth actions and HR/Admin progression decision assistance.

Input	Processing modules	Outputs
Learning Journey and Career Path	Course recommendation; gamification/leaderboard; manager dashboard; nudges by mail/platform; MyMentor; admin dashboard	Learning dashboard to Admin with progression decision assistance; employee Learning Journey; mentor support; progress signals

3.4 Level 4: Recalibration

Level 4 recalculates the BD skill profile at the end of the cycle and sends the profile back into Level 2.

- Inputs: previous BD Skill Profile, AI behavioral reassessment, manager functional skill form, Learning TNA, annual/interview feedback, continuous feedback, Amber, variable percentage and demographics.
- Processing: recalculate BD skills profile, re-run six-month contextual analysis, validate score movement.
- Validation guardrail: competency should not auto-decrease unless validated by manager, strong evidence or HR/Admin review.
- Output: new BD Skill Profile that becomes the input for the next Level 2 cycle.

4. Career Path Matrix Logic

From role	Allowed backend comparisons
BDM (RL1-2)	BDM (RL3-4), KAM (RL1-2), Supply Category (BDFE (RL2-4)
BDM (RL3-4)	KAM (RL3-4), ZM (RL4-5), Category Manager (RL3-4), Supply Category (BDFE (RL2-4)
KAM (RL1-2)	KAM (RL3-4), Category Manager (RL3-4), Supply Category (BDFE (RL2-4)
KAM (RL3-4)	ZM (RL4-5), Category Manager (RL3-4), Supply Category (BDFE (RL2-4)

This matrix controls backend comparisons only. It should not be exposed as a promise or eligibility screen to employees.

5. User Journey Requirements

Screen	Employee view	Backend / Admin action
Home	Simple introduction to MyCareer Compass.	Fetch employee context.
Profile Review	Employee checks role, level, city, manager and experience.	Use HRIS/Darwinbox defaults; store edited override if changed.
Skill Check	Employee rates functional skills in simple proficiency labels.	Store self-rating; wait for manager validation.
AI Roleplay	Employee completes behavioral scenarios.	AI scores behavioral skills.
Skill Report	Show strengths, learning needs and focus skill.	Run current profile match and admin-only path comparison.
Learning Journey	Show course recommendations, work application, mentor connect and check-ins.	Create learning tasks, nudges, dashboard signals and evidence requests.
Quarter Check-in	Employee updates progress and proof.	Recalculate progress and prepare Level 4 recalibration.
HR/Admin Dashboard	Not employee-facing.	Show skill profile, gap heatmap, pipeline, progression decision assistance and IJP signals.

6. Data Model for Tech Build

Entity	Purpose	Key fields
EmployeeProfile	Employee profile and organization context.	employee_id, name, role, RL, city, team, manager_id, tenure, demographics
CompetencyMaster	9-skill framework and definitions.	skill_id, skill_name, tag, sales_definition, product_definition
RoleSkillProfile	Expected proficiency by role and level.	role_id, skill_id, required_proficiency
CareerPathMatrix	Allowed backend role comparisons.	from_role_id, to_role_id, allowed_flag
SkillAssessment	Raw employee, manager and AI ratings.	employee_id, skill_id, source, score, timestamp
ValidatedSkillProfile	Final skill profile for a quarter.	employee_id, quarter_id, skill_id, score, label, confidence
ContextSignal	Learning TNA and feedback signals.	source, skill_id, direction, strength, recency, evidence_text
LearningJourney	Generated plan for skill gaps.	employee_id, quarter_id, focus_skill, courses, work_tasks, mentor_need
ProgressRecord	Quarterly progress and check-ins.	employee_id, quarter_id, check_in_day, learning, work, evidence, support

AdminDashboardSignal	Admin-only progression assistance.	employee_id, current_fit, possible_path, readiness_band, confidence, reason_codes
----------------------	------------------------------------	---

7. Integrations

Integration	Purpose	Notes
Darwinbox / HRIS	Employee profile, role, RL, manager, city, tenure.	Source of truth for employee data.
Manager validation form	Functional skill validation and quarterly skill change.	Mandatory for validated functional score.
AI assessment service	Behavioral roleplays and contextual interpretation.	Must return skill-level scores and reason codes.
Learning platform	Course recommendation and completion status.	Could link to LinkedIn Learning or internal learning platform.
MyMentor	Mentor recommendation and connect workflow.	Match by skill gap, role context, geography and availability.
Email / Teams / Platform nudges	Reminder and check-in triggers.	Use templates and event-based triggers.
Admin dashboard	Progression decision assistance.	HR/Admin-only, includes pipeline and confidence.

8. AI Responsibilities and Guardrails

- AI assesses behavioral skills through roleplays/scenarios.
- AI maps Learning TNA, feedback, continuous feedback and Amber text to skill strengths/gaps.
- AI recommends courses and Learning Journey steps based on gaps.
- AI can draft nudges, mentor request messages and check-in prompts.
- AI cannot promise role movement to employees.
- AI cannot directly lower a competency score without validation evidence.
- All AI outputs should store reason codes and source references.

9. MVP Build Plan

1. Build master data tables for competency matrix and career path matrix from workbook.
2. Build employee profile fetch and profile review screen.
3. Build employee functional self-rating and manager validation workflow.
4. Build AI behavioral assessment flow and score storage.
5. Build Level 1 validated skill profile engine.
6. Build Level 2 gap analysis and admin-only backend path comparison.
7. Build Level 3 Learning Journey modules: course recommendation, manager dashboard, nudges, MyMentor and admin dashboard.
8. Build Level 4 recalibration cycle with score validation guardrails.
9. Build HR/Admin dashboard for skill heatmap, progression decision assistance and pipeline visibility.

10. Acceptance Criteria

- System can ingest competency and career path matrices as configurable master data.
- Employee can complete profile review, skill check and AI assessment.
- Manager validation is captured and weighted at 80% for functional skills.
- If employee-manager gap is greater than 2 levels, employee input is rejected for that skill.
- Only fresh six-month HR context signals are used for contextual analysis.
- Variable/demographics are used for confidence only and do not directly change skill score.
- Employee sees Learning Journey and skill focus, not role eligibility.
- HR/Admin sees progression decision assistance, path comparison and pipeline.
- Level 4 recalibration can produce a new BD Skill Profile and loop back to Level 2.
- Competency decrease requires validation or HR/Admin review.

11. Decisions Needed Before Engineering Lock

Decision	Recommended default
Lead Category Manager scope	Treat as future/advanced Category role unless HR confirms current matrix.
ZM level naming	Workbook has ZM RL4-5 in Career Paths and ZM RL5-6 in Competency; align before build.
Competency decrease rule	Do not auto-decrease; require validation or review.
Learning score formula	Define after course/evidence systems are confirmed.
Mentor assignment logic	Skill gap + role context + city/accessibility + availability + no direct reporting line.
Admin readiness bands	Use current profile fit, path matrix, target gap and confidence score.

Appendix: Source Files Used

File	Use
MyCareer_Process Flow.xlsx	Renewed workflow, competency matrix and career path matrix.
MyCareer Compass Workflow Flowchart V6.pptx/png	Backend workflow visual reference.
MyCareer Compass User Journey and Workflow.pptx	Employee and HR/Admin user journey reference.
